

# Art Gallery Lab Review

BNTA

**A Customer should be able to buy an Artwork from the Gallery, reducing the money in their wallet and increasing the money in the Gallery till.**

**CUSTOMER:**

```
// Check: does the customer have enough money to buy the artwork?  
// if ^^ true, remove £ from wallet  
// add artwork to customer artCollection
```

**GALLERY**

```
// a method that initiates the sell - kicks off customer methods   
// increase the till with the proceeds from the sale (artwork price)  
// remove the artwork from stock
```

In the Gallery class I have access to **till** and **stock**. I will need access to the **artwork** and the **customer**.

### Gallery

- name : String
- till : double
- stock : List<Artwork>

```
sellArtwork(customer, artwork)
  customer.canBuy(artwork)
  customer.buyArtwork(artwork)
  removeFromGallery(artwork)
  setTill(newAmount)
```

Remove  
purchased  
artwork from  
the gallery's  
stock

Add the sale of  
the artwork to  
the till

In the Customer class I have access to **wallet** and **artCollection**. I will need access to the **artwork** and its **price**.

### Customer

- name : String
- wallet : double
- artCollection : List<Artwork>

```
canBuy(artwork)
buyArtwork(artwork)
```

Removes **price**  
from **wallet**  
Adds **artwork** to  
**artCollection**

Is there  
enough  
money in  
**wallet**  
to buy the  
artwork?
